

ADRIEN LACOURPAILLE

Full-stack developer

TypeScript · React · Node.js

Full-stack developer since 2023, sole developer of a multi-screen platform in production. I care about sound architecture (monorepos, clean architecture, APIs typed end to end), accessibility and tests. I follow release notes and keep my projects on the latest versions of their ecosystem. I use AI agents every day, down to building their tooling.

Interactive multi-screen presentation platform 2023 – present

Synchronised touch screens for client demonstrations. About 80% of the commits; sole developer since January 2026.

- React 19 / Express 5 / MongoDB monorepo: touch app, back office, OpenAPI-first API, realtime over Socket.IO.
- Set up OpenTelemetry observability; maintain and evolve the GCP infrastructure (Cloud Run, Firebase, Terraform) and the GitLab CI/CD; fix what the security scans report.
- MCP server to drive the platform from an AI assistant; Gemini integration.
- Tested with Vitest, Playwright and Testcontainers; accessible design system in Storybook.
- Regular major upgrades (React 19, Express 5, TypeScript 6, Vite 8), adopting the new APIs as they land.

Music data analytics application 2024 – 2026
Lead developer on the React/TypeScript web app (dashboards, metrics), the landing page and the React Native mobile app.

Streaming video player
Built in JavaScript on Shaka Player.

- Mentoring junior developers and apprentices; code reviews across the team.
- Internal tooling: Claude Code plugins shared by the team, n8n workflows (GitLab, team chat).

Personal projects

Taverla 2026 **Portfolio** 2026
Party games: players join by QR code and play on their phones. React / Hono / WebSocket monorepo, Docker, GitHub Actions, Playwright end-to-end tests, Lighthouse CI.
Accessible design system (React Aria), Storybook, in-browser tests, a Lighthouse CI gate at 100/100 on every page.

Séance 2026 **@adrienlcp/*** 2026
Training PWA, fully offline with no server: Workbox, IndexedDB, local reminders, SVG charts.
Ten tested TypeScript packages on npm, released from GitHub Actions with provenance, used by three apps.
